Geetha is poor in dealing with arrays. But her teacher gave her an array and asked to interchange the biggest number with the smallest number.

**Input Format**

First line contains the number of elements of array, n Second line contains the n spaced integers which are elements of the array

**Constraints**

interchanging

**Output Format**

Array in which the largest and the smallest numbers are interchanged

**Sample Input 0**

5  
3 5 7 8 4

**Sample Output 0**

8 5 7 3 4

**Sample Input 1**

3  
3 2 1

**Sample Output 1**

1 2 3

```
4  #include <stdlib.h>
5
6  int main() {
7      int n, i;
8      scanf("%d", &n);
9      int arr[n];
10     int minIndex = 0, maxIndex = 0;
11     for (i = 0; i < n; i++) {
12         scanf("%d", &arr[i]);
13         if (arr[i] < arr[minIndex])
14             minIndex = i;
15         if (arr[i] > arr[maxIndex])
16             maxIndex = i;
17     }
18     int temp = arr[minIndex];
19     arr[minIndex] = arr[maxIndex];
20     arr[maxIndex] = temp;
21     for (i = 0; i < n; i++) {
22         printf("%d", arr[i]);
23         if (i < n - 1)
24             printf(" ");
25     }
26     return 0;
27 }
28
```
